

IN THE ABSTRACT:

Please amend the abstract of disclosure as follows:

The present invention relates to an alert system with a sensor to detect ~~metal or magnetic material~~ article made of metal or magnetic. When detecting any dangerous ~~metal or magnetic material~~ article made of metal or magnetic nearby, the sensor sends out a signal to the control panel, prompting the warning system to send out a signal or sounds to warn the user, so as to protect the user from being hurt by dangerous ~~metal or magnetic material~~ article made of metal or magnetic.
